**A SELECT LIST OF
FIELD GROWN ROSES
FROM
RAINBOW GARDENS
Orrville, Ohio**

D. D. HOUGHTON, Prop.

VISITORS

Visitors are always welcome, just drop in at any time and look around. A fine place to spend a hot summer evening or a Sunday afternoon.

OUR GUARANTEE

All Roses delivered by us must give entire satisfaction. Any plants which do not prove satisfactory will be replaced without any extra cost to the purchaser. Those ordering our Roses through a Landscape Gardener, Dealer or Agent, will receive the same courtesy, although any errors or complaints must be made to the one from whom the purchase was made.

TERMS

We deliver free of charge all orders booked at the nursery or received by mail, and with this system and expense, we must ask CASH with order, or 25% with order, balance C.O.D.

PRICES

In the Price List enclosed with this book, We quote our very best selected grade of Roses. This grade we recommend as sure to please, it is "Something Better" in Roses and will give abundant results of fine blooms. This is the only grade on which we place our Guarantee.

EXPLANATORY

Abbreviations used to designate the class of Roses:

H. T. or HYBRID TEA Roses are the so called Ever-blooming or Monthly Roses. This class is in bloom throughout the entire season, commencing in June with the June Roses and continuing until freezing weather. The H. T. Roses are not as hardy as the other classes and must have some winter protection.

H. P. or HYBRID PERPETUAL Roses are of the Hardy Class. The bloom is very heavy in June and somewhat scattered throughout the summer, although they are everblooming, they should not be planted with the Hybrid Teas, as they grow more rampant and should be planted as a background, or where a large bush is preferred.

POLY. or POLYANTHA Roses are better known as Baby Ramblers, they form a dwarf compact plant, literally covered with clusters of bloom throughout the entire season, being used mostly for bedding purposes or for borders, although they are not out of place among Hybrid Teas.

CL. or CLIMBING ROSES, may also be classed as Rambler or Pillar Roses, being used extensively to cover porches, trellises, fences or any spot where a fast growing plant is desired.

CATALOG

BABY RAMBLER. Poly. (Levavasseur, 1903.)

This sort is always in bloom, grows bushy and dwarf in size, rarely over 18 to 24 inches in height. Every shoot and branch is crowned with a cluster of twenty or more Roses of brightest crimson, probably a little darker than Lafayette. The plant is often hidden with bloom. Just the thing to use for a small group or bed, or for any spot where a continual flowering is wanted.

BETTY UPRICHARD. H. T.

(A. Dickson & Sons, 1922.)

This new Rose of strong, upright growth and delicious perfume, presents a charming color combination, the opening flower being rich carmine blushed and suffused copper to orange, while the inside petals are soft salmon-pink with ecru. A free bloomer with high pointed buds. Very healthy plant.

CHAPLIN'S PINK CLIMBER. Cl.

(Chaplin Bros., 1928.)

This striking novelty is a cross between Paul's Scarlet and American Pillar, of strong growth, perfectly hardy, producing its large flowers, similar in size and form to Paul's Scarlet, on strong trusses of from 8 to 12 flowers each, but in color a rich, lively pink. It makes a glorious color effect for a number of weeks.

CHAS. P. KILHAM. H. T. (Beckwith & Sons, 1926.)

A brilliant and striking novelty which will appeal to and please every Rose lover. The buds are long pointed of perfect shape, opening to high centered, perfectly formed full double flowers of a rich and brilliant Oriental red, flushed with orange and glowing scarlet. A vigorous grower; very free flowering and sweetly tea-scented.

CHAS. K. DOUGLAS. H. T. (Hugh Dickson, 1919.)

A particular fine red garden Rose with great depth of petals and clear, unfading color. The long-pointed buds opening to large, loosely formed flowers of striking crimson-scarlet; slightly fragrant. Strong, branching growth and an abundance of healthy foliage. One of the finest red garden Roses.

CHATEAU DE CLOS VOUGEOT. H. T.

(Pernet-Ducher, 1908.)

This is indeed the black Rose. The blooms are of the darkest and richest color known in Roses, it resembles heavy dark velvet, shading from deepest velvety maroon-red to blackish crimson. Blooms continuously, delightfully fragrant, and very double. Plant is vigorous but more spreading than upright. Named after a famous old French wine.

CLIMBING AMERICAN BEAUTY. Cl.

(Hoppes Bros. & Thomas Co., 1909.)

A strong growing, hardy climber, of the largest size and rich fragrance of the popular American Beauty, possessing a heavy resistant foliage; brilliant carmine flower of especially fine form and rich perfume, borne in clusters on moderately strong stems.

CONRAD F. MEYER. Hy. Rugosa. (Mueller 1889.)

The handsomest Rugosa. Very large, well built flowers of light silvery pink, profusely produced on strong stems from the enormous thorny canes fully 8 to 10 ft. high. A well grown plant is a miraculous sight when in full flower, but it must have plenty of room in which to grow and display its splendor to best advantage.

DAME EDITH HELEN. H. T. (Dickson & Sons 1926.)

Perfect buds developing into wonderful flowers of immense size and produced singly on well foliated strong canes. The flowers are composed of very substantial broad petals which curl back prettily, forming a glorious long pointed bud and a full double flower which is beautiful in every stage of development. Color a brilliant, yet soft rose-pink; strongly sweet-scented. This is truly an exhibitors or fancier's Rose.

DOROTHY PERKINS. Cl.

(Jackson & Perkins Co., 1902.)

Beautiful shell-pink in color, which lasts well, fading at last to deep rose. Very sweet scented flowers borne in immense clusters. The foliage is bright glossy, and not subject to mildew until late Fall. One of the best climbers and much too popular to need recommendation

DR. HUEY. Cl. (Capt. Thomas, 1914.)

Similar in habit of growth to Paul's Scarlet Climber but of an intense dark crimson maroon color, and when fully expanded shows its numerous golden stamens. This is the darkest and best red climber of the cluster type, and a great favorite for those who like dark Roses.

DR. W. VAN FLEET. Cl. (Dr. W. Van Fleet, 1910.)

A Rose which on account of its dainty and exquisitely shaped buds and flowers, has become a great favorite. The long pointed buds are of a rich flesh-pink on stems 12 to 18 inches long; splendid for cutting. Undoubtedly the best hardy climber, supreme in vigor, adaptability, and sheer beauty of foliage and flower.

DUCHESS OF ATHOLL. H. T.

(Dobbie & Co., Ltd., 1928.)

Large, globular buds and flowers of deep bronzy yellow, tinged with orange and old-rose. The plant is very vigorous and bushy, and a perfuse bloomer. This Rose has the most striking color of any recent variety, and is of especially handsome shape when half open. The plant is extremely vigorous, but requires a little extra winter protection.

E. G. HILL. H. T. (E. G. Hill & Co., 1929.)

Large, ovoid buds and immense dazzling red flowers, shading to darker crimson, on long stems. Plant vigorous and free blooming. This Rose originally used as a greenhouse forcing variety, has proven better outdoors than inside. It has plenty of petals well placed to make a flower of finest form.

EARL HAIG. H. T.

A compact flower of rich cherry crimson, the thick rolling petals are very attractive. We believe this variety will give us a new shade in our Red Roses, although it needs more thorough testing before an accurate description can be made.

EBLOUISSANT. Poly. (E. Turbat & Co., 1928.)

Glowing dark red flowers of medium size, quilled like little cactus Dahlias, and shaded heavily with velvety crimson. Large, compact trusses, borne on dwarf but robust plants, which blooms constantly. Dwarfier than most polyanthus.

EDITH CAVELL. Poly. (Meiderwyck, 1917.)

The outstanding color in Roses of this class. Brilliant scarlet, overlaid rich crimson, with white eye. Constantly in bloom. Large clusters of semi-double flowers unusually vigorous, and with clean healthy foliage.

EDEL H. T. (S. McGredy & Son, 1919.)

This new white Hybrid Tea Rose is at the top of the list of big white Roses. A strong grower. Foliage deep glossy green. Buds large, high and symmetrical, and borne on long stiff stems. The open flowers are large, waxy petals are of fine texture, producing a lasting flower. Fragrant and a free bloomer.

ELDORADO. H. T. (Howard & Smith, 1923.)

This yellow variety is well at the top of the Rose list. Golden buds flushed with red, opening to clear yellow, cupped blooms filled to the center with crinkled petals, slightly fragrant. Plant is erect with fairly good foliage.

ELVIRA ARAMAYO. H. T.

(P. J. Looymans & Co., 1922.)

This new rose in a new coloring, at once attracts immediate attention. A strong grower of free blooming habit, quilled petals, are cactus shape. The coloring is rich and may be described as Indian Red in which are blended orange-carmine, toned with madder and salmon pink. Long stemmed and especially fine for cutting.

ETOILE DE HOLLAND. H. T.

(H. A. Verschuren & Sons, 1919.)

The best all around red bedding Rose yet introduced. A strong vigorous healthy grower and free bloomer, which, like the popular Radiance Roses, improves in vigor from year to year. It is a continuous bloomer with large, moderately double flowers that are particularly attractive in the half-open state. In color a brilliant crimson red.

ETOILE DE FRANCE. H. T. (Pernet-Ducher, 1904.)

A magnificent red Rose that has come to stay. Plant an extra strong grower, with intense crimson flowers on long stems, very fragrant and free blooming. Fair for cutting and should be in every list.

FOUNTANELLA. H. T. (E. G. Hill & Co., 1927.)

Large buds and immense, double flowers of lemon-yellow, deepening to gold at the center. A vigorous grower, with healthy foliage, and very free flowering. A new variety which will be a desirable addition to our yellow Roses.

FRAU KARL DRUSHCKI. H. P. (P. Lambert, 1901.)

Also called "White American Beauty" and "Snow Queen." Everywhere a hardy and vigorous grower with strong, heavy, bright green foliage, it has everywhere become famous as the very highest type of snow-white Rose ever introduced, it has become the standard by which all white Roses are judged. The best white Rose of any class, whose only faults are scentlessness and over-exuberant growth for a small space; blooms freely and continuously for a Hybrid Perpetual.

GENERAL JACQUEMINOT. H. P. (Roussel. 1852.)

An imperishable old Rose whose lovely color and fragrance were the standard of perfection for half a century. The favorite Jack Rose with bright velvety crimson flowers, of moderate size and excellent shape. Plant is strong and bushy. Should be classed as a June Rose, but usually blooms the second time.

GLORIA MUNDI. Poly. (G. deRiuter, 1929.)

A most striking new orange-Scarlet Polyantha, a wonderful improvement over all other Roses of this type, in color, a most brilliant orange-scarlet imaginable that does not fade but retains its brilliancy to the finish. The flowers are well formed, full double and borne on many flowered graceful clusters. A free and continuous bloomer.

GOLDEN SALMON. Poly. (W. Cutbush & Son, 1926.)

Bright orange-scarlet buds and newly opened flowers which quickly turn to bright blazing orange, Growth is vigorous and bushy. Makes a splendid display when planted in masses and the faded trusses kept cut.

GRUSS AN AACHEN. Poly. (Geduldig, 1909.)

A very distinct type of polyantha Rose with exceptionally large flowers for this type. Always a mass of bloom throughout the season, color flesh-pink with salmon and yellow shadings, very effective as a bedder.

GRUSS AN TEPLITZ. Hybrid China.

(Geschwindt, 1897.)

Medium sized double blooms of brilliant crimson with velvety shadings and intense fragrance. Blooms in open clusters with the utmost freedom throughout the whole season. Bush extremely vigorous and hardy. The best of all red Roses for garden decoration.

INDEPENDENCE DAY. H. T. (Bees, Ltd., 1919.)

Flaming yellow buds, heavily shaded with copper and brown, opening quickly to moderately large flowers which fade to light orange-pink. Strong grower, of upright habit and a very heavy bloomer. One of the best brilliant colored varieties of this type.

JACOTTE. Cl. (Barbier & Co., 1920.)

Large, semi-double flowers of orange-yellow, tinted copper-red, borne in clusters. Strong profusely blooming plant. In effect the flowers are much like Independence Day, but a little smaller. We know of no other climber more beautiful than Jacotte.

JOANNA HILL. H. T. (J.H.Hill & Co., 1928.)

Large, long buds and deep, full flowers of fine creamy yellow, flushed with orange at the base. Tall, strong grower, producing blooms on long, strong stems. This is a very fine yellow Rose, the stems are very long, and when the flowers are cut, quickly renew themselves to produce new blooms. A very fine variety for producing long-stemmed cut flowers.

JOHN RUSSELL. H. T. (Dobbie & Co., 1924.)

This new sort is a valuable addition to any list, as we have not enough of red Roses of outstanding merit. A very strong vigorous grower; both bud and flowers are of lovely form, and rich, velvety, deep crimson color.

JULIAN POTIN. H. T. (Pernet-Ducher, 1927.)

The Golden Pernet. A rich golden yellow that grows richer and deeper as the flowers mature. The buds are long and shapely and develop into large full flowers of beautiful form, delightfully sweet-scented. The plant is upright and vigorous, a profuse bloomer and is very resistant to disease.

KILLARNEY. H. T. (A. Dickson & Son, 1898.)

One of the most popular of pink Roses. Long pointed buds, opening to flat, bright sparkling pink blooms with enormous petals. Vigorous grower and very free flowering.

KILLARNEY WHITE. H. T. (Waban, 1909.)

A pure white sport of the famous Killarney, the long buds are large, the open flowers surpass in beauty and size even its parent. Chiefly used for greenhouse forcing, but is equally as good in the garden.

LAFAYETTE. Poly. (Nonin, 1921.)

Large semi-double flowers of striking light crimson, which fades very little; blooms very liberally in loose clusters of 30 or more. Plant tall, healthy, and more than usually attractive. Fine for bedding and decorative schemes in the garden.

LAURENT CARLE. H. T. (Pernet-Ducher, 1907.)

Large oval buds and blooms of deep, glowing carmine-crimson, perfectly formed and pungently fragrant. Plant of average growth with splendid dark green foliage. It blooms freely throughout the season.

LADY ALICE STANLEY. H. T.

(S. McGredy & Son, 1909.)

Perfectly formed flowers with shell-shaped petals, deep coral-rose outside, delicate flesh inside, flushed and suffused with bright pink. Of vigorous growth, free blooming and unusually free from disease.

LADY MARGARET STEWART. H. T.

(A. Dickson & Son, 1926.)

A large exhibition bloom with enormous petals. It is of perfect form, with a high pointed center, golden yellow, shaded and streaked with orange and red. Especially handsome foliage free from disease. One of the best recent introductions, with splendid color, well shaped buds, and large flowers freely produced.

LADY HILLINGDON. Tea. (Lowe & Shawyer, 1910.)

One of the most beautiful Roses ever seen. Color an intense apricot-yellow at the heart of the flower. An endless amount of flowers are produced on long wiry stems, well above the foliage. This is a Tea Rose and requires more protection than the Hybrid Teas but is well worth the extra care.

LORD LAMBOURNE. H. T.

(S. McGredy & Son, 1925.)

Very large semi-double flowers of deep buttercup-yellow, with petals edged carmine-scarlet. Free growth and profuse bloomer. Very attractive in the bud and half-open bloom.

LOS ANGELES. H. T. (Howard & Smith, 1916.)

This Rose is a giant among Hybrid Teas. One of the largest and possibly the largest of them all. An unusually strong grower, of ideal form, buds long and pointed, expanding into an immense flower of perfect shape. Color a lovely flame-pink, toned to coral and shaded with gold at base of petals. An exceedingly beautiful Rose which should be in every garden.

LOUISE CATHERINE BRESLAU. H. T.

(Pernet-Ducher, 1912.)

Remarkably bright buds and blooms of reddish orange, paling to light orange with age. Opens to large globular flowers, fairly full, and without much fragrance. The bush is spreading and dwarf. A very attractive sort.

MARGARET McGREDY. H. T.

(S. McGredy & Son, 1927.)

Large, ovoid buds and double, cupped flowers of solid orange-vermilion. Foliage light green and resistant to black spot and mildew; very prolific and hardy wherever tried. This extraordinary Rose has been widely tested in this country and found good. The color is marvelous, although it fades a little the second day, and the plant is continually in bloom. One of the finest recent Roses.

MARION CRAN. H. T. (S. McGredy & Son, 1927.)

Large full double flowers of buttercup-yellow, blushed with cerise and scarlet; slight fragrance. Plant very vigorous and free blooming. The flowers are large, of fine substance, and have a lovely blend of color.

MEVROUW G. A. VAN ROSSEM. H. T.

(G. A. Van Rossem, 1926.)

A marvelously beautiful Rose with a unique color combination not found in any other variety, a most striking blending of dark vivid orange and apricot on a golden yellow ground with frequent touches of bronze on the reverse of the petals. The sweet-scented flowers are very large, of perfect formation both in the bud as well as in the fully developed flowers which are produced freely on vigorous upright growths.

MISS ROWENA THOM. H. T.

(Howard & Smith, 1923.)

Enormous buds and blooms of fiery rose and mauve, shaded with old-gold at the center, borne on long, strong stems. A profuse, continuous bloomer and a very vigorous plant. It equals the popular Radiance Roses, but the flowers are of much larger size.

MME. ALEXANDRE DREUX. H. T.

(Soupert & Notting, 1921.)

This sort is a most wonderfully colored yellow Rose. Large pointed buds of yellow overlaid with coral-red, the full open flowers are of a distinct shading of old gold and orange-red, it blooms continuously with almost every bloom a perfect one. Plant is moderately vigorous. A fine Rose for the experienced rosarian.

MME. BUTTERFLY. H. T. (E. G. Hill & Co., 1918.)

Fine, light pink buds and flowers, tinted with gold near the base of the petals, of exquisite shape and richly perfumed. Plant is strong, throwing up big branching sprays of bloom. A sport of Ophelia, which it resembles in form but a stronger grower, producing more and better flowers.

MME. CAROLINE TESTOUT. H. T.

(Pernet-Ducher, 1890.)

Large, globular flowers of satiny rose, shaded lighter toward the outer edge of its enormous petals; fairly fragrant. Plant strong and a persistent bloomer. On the Pacific Coast, where Roses attain their greatest perfection, this sort forms the majority of all Roses planted, and is greatly admired everywhere.

MME. EDOUARD HERRIOT. H. T.

(Pernet-Ducher, 1913.)

Sparkling buds of coral-red and orange, opening to large, semi-double flowers of undescribable brilliant orange-red and salmon. Plant is moderately strong; very free flowering. One of the most brilliant colored Roses known, although not very double.

MME. GREGORIE STAECHELIN. Cl. (P. Dot, 1927.)

This Spanish Beauty has inherited the best qualities of both of its parents, Frau Karl Druschki and Chateau de Clos Vougeot. The long pointed buds are crimson at first as the petals divide, then the firm outer petals show splashes of carmine as the flower opens, with an iridescent pearl-pink inside and it is richly perfumed. It grows 12 feet or more, the main stem of the plant shoots upright and the long bloom-spurs stand out 18 inches at right angles, with exquisite, full, fragrant bloom. The blooms come early in June and last over a long period, although it is not an everblooming variety.

MME. JULES BOUCHE. H. T.

(Croibier & Son, 1911.)

While not a pure white, it being at all times slightly tinted with flesh at the center, it is to all intents white and without question one of the best white everblooming bedding Roses. The flowers are large, quite double and of splendid form, both in bud as well as in the fully expanded flower; it is fragrant, a vigorous grower and very free flowering.

MME. AMBROSE RICARDO. H. T.

(S. McGredy & Son, 1914.)

Very large, full blooms of pale pink and light yellow, of firm incurved form and some fragrance. One of the finest and largest of all Roses. Its enormous blooms improve in color and texture and keep for days after being cut.

MRS. A. R. WADDELL. H. T.

(Pernet-Ducher, 1908.)

Beautiful, tapering buds of yellowish copper, opening to nearly single, cupped blooms of bronze-pink and apricot, with a delicate, delicious perfume. The plant is rampant, branching, and very free flowering. The foliage is better than the average. A splendid Rose throughout the season, although at its best in the Fall.

MRS. CHARLES BELL. H. T.

(Mrs. Charles Bell, 1917.)

Another grand Rose of the Radiance type. It has all the strong, vigorous growth and the free blooming qualities of Radiance, and large, full flowers and cupped petals, and in addition the opaline-pink of Radiance is blended into golden and salmon-pink in Mrs. Chas. Bell. The plant is notably strong and bushy, bearing good foliage seldom attacked by disease.

MRS. ERSKINE PEMBROKE THOM. H. T.

(Howard & Smith, 1926.)

The best yellow bedding Rose we have today. It is of clean, healthy, vigorous growth with abundant dark bronzy disease resisting foliage and a continuous free bloomer throughout the season. The good sized buds are long and develop into full, double, very shapely flowers of a rich lemon yellow, sweetly scented.

MRS. JOHN LAING. H. P. (Bennett, 1887.)

Large, smooth bloom of clear pink, cup-shaped, double and very sweet scented. Plant is vigorous, erect, almost thornless with handsome foliage and is most floriferous. One of the best Hybrid perpetuals; blooms profusely early, and gives scattered flowers in summer and a fair display in the Autumn.

NORMAN LAMBERT. H. T.

(S. McGredy & Son, 1926.)

A distinct color combination. The outside of the petals are a deep chrome-yellow with a marginal color effect of brilliant orange-scarlet merging to irregular zone of burnt orange, the inside salmon-orange suffused bronze, shading to a yellow at the base, delightfully fragrant and free blooming. Plant tall and healthy.

PAUL NEYRON. H. P. (L. Levet, 1869.)

Dark lilac-rose blooms of immense size, fair form, very double and remarkably fragrant. Quite vigorous, strong almost smooth canes with tough leathery foliage; particularly free and constant bloomer. When well grown, probably the largest of all Roses. One of the best in this class.

PAUL'S SCARLET CLIMBER. Cl.

(W. Paul & Son, 1916.)

The most attractive color seen in Roses—blazing vivid scarlet, semi-double flowers in profuse clusters remaining in flower a long time. Strong vigorous growth; clean, bright, healthy foliage; very hardy. One of the most popular climbers and is being planted in quantity everywhere.

PRESIDENT HERBERT HOOVER. H. T.

(L. B. Coddington, 1930.)

A glorious Rose, wonderfully free in the easy manner in which it grows and charming in its color arrangement which is a splendid combination of cerise-pink, flame, scarlet and yellow; this combination of color gives the most dazzling color effect imaginable. The buds are beautifully pointed, the flowers large, composed of broad thick, heavy petals, with moderate fragrance.

PHARISAER. H. T. (Hinner, 1903.)

Graceful buds and very well-shaped double blooms of white and rose pink, shaded with salmon; mildly fragrant. One of the very good reliable Roses with an especially attractive color. Its excellent growth and free flowering habit have made it popular for many years.

PRIMROSE. Cl. (Barbier & Co., 1929.)

This new Rose is the ideal hardy yellow climber, a strong vigorous grower and hardy under the same conditions under which Dr. Van Fleet and similar varieties will succeed. In color light primrose-yellow which is maintained until the petals drop. Its flowers are on long stems in trusses of from 2 to 5, about $2\frac{1}{2}$ inches in diameter, the plant is of vigorous climbing habit, free flowering, and the flowers last in good condition for a long time. The foliage is dark green and very healthy.

RADIANCE. H. T. (J. Cook, 1908.)

An ideal bedding Rose of American origin that continues to produce its large fragrant flowers throughout the most unfavorable hot summer weather when frequently many other varieties fail; in color a brilliant carmine-pink with salmon-pink and yellow shadings at the base of the petals; truly a Rose for every garden.

RED RADIANCE. H. T. (Gude Bros., 1916.)

Large globular flowers of firm texture and substance, of the rich red shade of American Beauty; in all other respects it is identical with Pink Radiance; succeeds well anywhere.

REV. F. PAGE ROBERTS. H. T.

(B. R. Cant & Sons, 1921.)

Copper-red buds of great length, opening to golden-yellow blooms stained outside with red, fully double, and very large; fragrant. Strong branching habit with healthy foliage. It has become one of the real favorites of all good rose-growers, particularly because of its superb form.

SOUVENIR DE CLAUDIUS PERNET. H. T.

(Pernet-Ducher, 1920.)

A most vigorous grower of erect branching habit, beautiful, brilliant green foliage, long pointed buds of exquisite shape, carried on long stiff stems. Very large, full flowers with elongated deep petals, a beautiful formed bloom. Color, striking sunflower yellow, deeper in the center. This is one of the first clear yellow Roses with vigorous growth suitable for average garden use. Does best in dry warm weather.

TALISMAN. H. T. (Montgomery Co., 1929.)

The Rose of many Gold Medals. It is the most remarkable piece of coloring that we know in any Rose; a combination of shadings of gold, apricot, yellow and deep pink or old rose. The outside of the petals are bright yellow, gold and pink; as the flower develops and the petals unfold they become bright apricot, gold, deep rose-pink or old-rose. The bud is long, perfectly formed, averaging about 28 petals, the plant is a strong, vigorous grower with glossy, green foliage and free flowering.

VILLE DE PARIS. H. T. (Pernet-Ducher, 1926.)

Round buds of clear yellow and big globular flowers of the same hue, untouched by any other color. Plant is notably tall and wiry, and the foliage dark, small, and very leathery. In form the bloom is much the shape of Radiance.

WHITE DOROTHY PERKINS. Cl.

(B. R. Cant & Sons, 1908.)

Small, very double flowers of pure creamy white, borne in great clusters on a rampant healthy plant. It is identical with Pink Dorothy Perkins except in color. Without a doubt the best white climber.

WILHELM KORDES. H. T. (W. Kordes Sons, 1922.)

Long, Pointed buds and double, high centered flowers of deep golden salmon, overspread with a tint of copper, and veined with red. Very fragrant and unusually free flowering. Vigorous, compact growth. Does best early in the season and in Autumn.

WILLOWMER. H. T. (Pernet-Ducher, 1913)

Superb buds and blooms of richest pink, shining with a yellow glow which seems to come from the heart of the flower. A very strong grower and persistent bloomer. One of the best of all Roses, fine for cutting, although lacks fragrance. It is a good substitute for Los Angeles, which is not always easy to grow.

GARDEN ROSES

How To Make Them Grow and Bloom

This little book is chuck full of information from cover to cover. Not an advertisement or catalog, but a complete and brief little book on Roses for those wishing to grow the best in Roses. Published by one of America's Foremost Rosarians, J. Horace McFarland.
